The Faculty Practice Building brings together one of the largest multispecialty groups in Kentucky. Patients from Louisville or anywhere in the Commonwealth have the opportunity to be evaluated and treated by some of the most prominent physicians in nearly every medical and surgical specialty. Patients will see their physicians, be referred for consultation, and obtain needed laboratory tests and x-rays, all under one roof. Practicing Medicine at the highest intellectual level and bound together by a common information infrastructure, University of Louisville doctors will be able to provide the best possible care for patients and their families.” —George R. Aronoff, M.D., FACP
- Chief, Division of Nephrology

The Neurosurgical Institute of Kentucky, PSC is the faculty practice of the University of Louisville’s Department of Neurological Surgery. We provide a full range of state of the art cranial and spinal care for adults and children in a private practice setting. Our physicians have brought new hope to patients over seventy years, and are internationally recognized for their contributions to treatment, research and teaching in neurosciences. We have the state’s only Pediatric Neurosurgeon and two of only three fellowship-trained Neuro-Oncologists in Kentucky. Four of the six physicians in the department were trained in the DNS residency program.

The Department of Neurological Surgery transitioned from a division of General Surgery to its own department in 1995 under the leadership of the late Henry D. Garretson, MD. Christopher B. Shields, MD assumed the position of Department Chair in 1997 and is dedicated to the growth of the Kentucky Spinal Cord Injury Research Center which ranks 5th in NIH grant funding of all University departments.

Kentucky Neuro Associates is the division of the Department of Neurological Surgery that serves the University Hospital patient population. While these patients are typically followed in the ACB Neurosurgery Clinic, there is often a need to follow certain critical care, study or index cases in a different environment. To meet the needs of this population, Kentucky Neuro Associates will be establishing its first private office in the Faculty Practice Building.

To refer a patient for neurosurgical care, please contact Neurosurgical Institute of Kentucky, PSC at 583-1697 (800-NEURO-KY).

The UPA Executive Committee approved “Customer Focus Inc” as our customer service training program. The first step of program implementation is participating in Customer Focus assessment sessions in which we gather vital information from staff and faculty, as able, to customize the program to meet our expectations and reach our goals. We are beginning a new FPB IT group which will meet monthly to increase communication and plan a smooth transition into the FPB. Please note the meeting date/time above & send your IT representative.
