Heme

- Recognize CLL biomarkers
- Recognize chronic phase cml
- Recognize hairy cell leukemia
- Recognize potentially lethal complications of CLL treatment
- Recognize that hemolysis can occur with no obvious progression of CLL
- Understand how to distinguish mantle cell from CLL
- Understand the treatment of resistant CLL
- Understand the staging of CML
- Understand the management of poor risk CML
- Management of high risk MDS
- Understand the appropriate f/u of Hodgkins lymphoma
- Understand the prognosis of asymptomatic Waldenstrom’s

These are question topics from the ONC in-service. All the fellows essentially failed the heme in-service and thus I did not go through and take out topics. There were too many to be meaningful.
