Other/pharmacology/supportive care/Clinical trials

Recognize agents that have been proven to prevent cancer 3

Recognized and treat anthracycline extravasation 4
Recognize the pharmacogenetic factors on chemotoxicity 3
Understand the adverse effects of chemotherapy 6
Understand appropriate chemotherapy dosing 3
Understand drug interactions with chemotherapeutic agents 3
Understand the pharmacology of irinotecan 3
Understand the toxicity of chemotherapeutic agent 5
Recognized complications of pharmacotherapies used in end of life care 2
Understand the appropriate treatment with fluoropyrimidine 2
Understand treatment of patients with compromise renal function 4
Recognize cardiac toxicity of chemotherapy 3
Recognize contraindications to chemotherapy 2
Recognize gilberts syndrome
Recognized common adverse effects of antiemetic drugs 2
Recognize neutropenic sepsis
Understand appropriate treatment with fluoropyrimidine 2
Understand drug interactions with chemotherapy agents 4
Recognized adverse effects of bevacizumab in the elderly patients

Recognize when to initiate hospice in the elderly
Understand the appropriate use of cannbioids as appetite stimulants 3
Recognize complications of pharmaco therapies used in end of life care 2
Understand proper communication of poor prognosis

Understand the indications of radiation therapy
Understand the patient’s cultural and moral differences when planning therapy

Understand the appropriate interpretation of clinical trial results 3
Understand appropriate basic statistical measures 2
Recognize appropriate clinical trial eligibility
Understand intention to treat analysis 4
Understand basic statistical measures
